

(Case Engraving) Ship plan with I.C. U.V. blocky
reagent is a possible way to make a directly
image plate. Mentioning this idea to J. Rastetter
+ E. Murphy.

Discuss the lease image feasibility with W. G. Orr

1. Use U.V. Absorber (MX40 BASE, Water ZPA soluble) in slip film to form a U.V. resistant Flexo Sheet Polymer. (U.V. sensitive)
2. Use laser image technology (Thiel Int. Japan for gravure), to etch & sublimate the slip film to make a ~~image~~ ~~plate~~ layer on surface
3. Expose the image to U.V. light for photo plate. A ~~bottom~~ ~~disclosure~~ will be filed.

The U.V. absorb or block layer can be resin, metal plate or rubber.
